**COURSE & TRAINING: AI and the 6Cs for Future-Ready Teaching**  
**(Ljubljana, Slovenia)**

## **TESTIMONIAL**

**Hannah Buttigieg, Primary Teacher, St Augustine Primary, Marsa**

My week-long training course in Ljubljana proved to be an incredibly enriching professional development experience that transformed my understanding of modern educational practices. The program focused on two key areas: mastering the 6Cs framework and exploring AI integration in teaching.

We explored all six of the 6Cs framework, including Critical Thinking, Creativity, Communication, Collaboration, Citizenship, and Character, through engaging, hands-on activities that demonstrated practical classroom applications. One particularly memorable exercise involved lining up by birth month without speaking, which clearly indicated that Communication comprises far more than just verbal skills, including non-verbal cues, facial expressions, and body language. Another engaging challenge required us to come up with original questions for the answer "Twelve," which encouraged our creative thinking and demonstrated how to foster open-ended thinking in students.

The AI component introduced me to several educational platforms including Magic School, Invideo, Claude, and Eduaide. These tools can significantly improve lesson planning, help create interactive activities, and develop visual explanations that better engage and include all students. Our trainer particularly emphasised the connection between AI use and the 6Cs framework, highlighting how Critical Thinking becomes crucial when working with AI. As educators, we need to teach

students to question, analyse, and verify AI-generated content rather than accepting it without consideration.

This experience provided me with practical strategies and tools that I can implement in my classroom while contributing to both my professional development and personal growth as an educator.
