COURSE & TRAINING: AI and the 6Cs for Future-Ready Teaching
(Ljubljana, Slovenia)

TESTIMONIAL

Lara Mamo, Primary Teacher, Our Lady Immaculate School

The course has exposed us to the 6Cs (Critical thinking, Collaboration, Communication, Creativity, Citizenship, Character). We were given a deep understanding of the 6Cs by the extraction of information from each and every one of the participants (critical thinking), by engaging us in different interactive activities and by being provided with the necessary information by the trainer.

We were then exposed to the below AI tools which will aid in the planning, delivery, assessment and feedback-gathering in the teaching career.

ChatGPT, Claude and Perplexity are different AI platforms which are used to generate any kind of information anyone can ask for. We also compared them by giving the exact same prompts. We concluded that Perplexity gives information extracted from more professional sources (also given) whereas Claude and ChatGPT may, at times, not be accurate. We have been educated about the importance of the intervention of human critical thinking when generating information from AI platforms. Us, educators are responsible in training our young students in critical thinking so that eventually, in real life they will hopefully be able to distinguish between AI real and fake/inaccurate information.

We have also been exposed to other teaching AI tools which will aid in our teaching career ; Magicschool, Invideo and HeyGen. We were given a taste and some time to explore however such platforms are very vast and we can use and explore as we go about throughout our years.
