TESTIMONIAL

Daniela Falzon, Primary School Teacher,
St Aloysius Primary Balzan

I am grateful for the opportunity to take part in the Erasmus+ mobility in Maths Mastery in Slovakia, as it has helped me grow in many ways. The course introduced me to new strategies that I can use to help children develop stronger reasoning skills, become more efficient learners, and build better number sense. I am eager to adapt my lessons by incorporating the different methods and approaches presented during the course.

The programme also provided valuable opportunities for collaborative group work, the practical application of new teaching strategies, and the sharing of ideas and good practices with fellow Maltese teachers from different schools, many of whom I met for the first time through this course.

Beyond the professional learning, this experience encouraged me to step outside my comfort zone by working closely with people I had never met before. It taught me to appreciate and value different perspectives, ideas, and attitudes. In this respect, the programme truly exceeded my expectations.

I thoroughly enjoyed every moment spent with my group, both during and after the course sessions. We genuinely enjoyed each other's company and appreciated that, although we all shared the same profession, each of us brought a unique personality and perspective. Despite our differences, we built respectful relationships and worked together exceptionally well, making the experience both memorable and rewarding.
