TESTIMONIAL

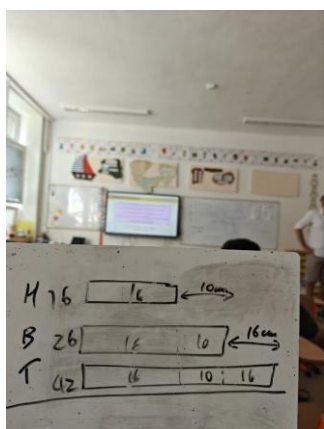

Kenneth Debono
Head of Department – Primary Mathematics
Secretariat for Catholic Education

Last week, I had the privilege of participating in an Erasmus+ training opportunity in Partizánske, Slovakia, alongside 10 Maltese educators committed to enhancing the teaching and learning of Mathematics.

This experience was made possible through the collaboration of Mr James Cheater, Maths Mastery Trainer and Director of Impact Maths Consultancy Ltd, who delivered an excellent three-day course, and Ms Tatiana Lukáčová Guliková, who warmly welcomed us to Cirkevná základná škola Jána Krstiteľa Partizánske and gave us the opportunity

to observe mathematics lessons. Thanks also go to Ms Marisa Deguara and Mr Chris Bugeja at the SfCE for coordinating this initiative.

The training focused on the teaching for mastery, highlighting the importance of developing deep conceptual understanding through carefully sequenced learning, the CPA approach, mathematical reasoning, problem-solving, and responsive teaching strategies.

Beyond the excellent professional learning, this Erasmus+ experience reinforced the value of international collaboration. Sharing ideas, observing

different educational contexts, and building lasting professional relationships will strengthen our practice and ultimately benefit the children we teach. I look forward to sharing these insights across our schools in Malta and Gozo, ensuring more learners develop confidence and a genuine love for mathematics.
